SUMMARY

CSE student focused on Full-Stack Development with hands-on experience in Java, JavaScript, Python, SQL, React.js, Node.js, Express.js, REST APIs, JWT, Socket.IO, MySQL, MongoDB, Docker, Git, GitHub, Vite, Prometheus, and k6. Built applications involving authentication, real-time communication, database integration, API gateways, load balancing, and fault tolerance, with a strong foundation in DSA, OOP, DBMS, and System Design.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering -CGPA: 7.0

2023-2027

Cambridge institute of technology , Bengaluru , Karnataka

Higher Secondary Education (+2 Science) - 75 %

2021-2023

Galaxy Secondary school , Dhangadhi, Nepal

SKILLS

Programming Languages : Java, JavaScript, Python , GO

Frameworks : React.js, Node.js, Express.js

Databases : MySQL, MongoDB

Backend & APIs : RESTful APIs, JWT Authentication, Socket.IO

Core Concepts : Data Structures & Algorithms, Object-Oriented Programming, DBMS, System

Design Tools : Git, Docker, Figma

PROFESSIONAL EXPERIENCE

Web Development Intern – Remote

Mar 2025 – Nov 2025

DL uploads pvt ltd, Kathmandu, Nepal

- Developed **10+ React.js frontend components** for media discovery, user interaction, and marketplace workflows.
- Integrated **5+ REST API endpoints** and built **8+ reusable UI components** to support dynamic media workflows and improve maintainability.
- Contributed to **3+ core marketplace workflows** covering media upload, discovery, and user purchases using React.js, JavaScript, Git, and GitHub.

PROJECTS

• **CampusPulse - Full-Stack Campus Management Platform**

[\(Code Link \)](#)

React.js, Vite, Node.js, Express.js, MySQL, Socket.IO, JWT

- Built a full-stack platform with React.js, Node.js/Express.js, REST APIs, and MySQL.
- Implemented JWT authentication, role-based access, and real-time communication using Socket.IO.
- Integrated geolocation, weather APIs, and TF-IDF-based recommendations.

• **Immune-System — Fault-Tolerant API Gateway & Load Balancer**

[\(Code Link \)](#)

Go, REST APIs, Docker, Docker Compose, Prometheus, k6

- Built a fault-tolerant Go API gateway with load balancing, health checks, and backend recovery.
- Implemented circuit breakers, retries, monitoring, and telemetry for resilient web-traffic management.
- Containerized with Docker and tested using Go tests and k6.

CERTIFICATIONS

React.js Certification - HackerRank

AWS API Gateway — Amazon Web Services
